Telephone Fax E-mail (competent person)

1.4 Emergency Telephone Number Emergency Phone No. Language(s) spoken:

SECTION 2: HAZARDS IDENTIFICATION

2.1 Classification of the substance or mixture

2.1.1 Regulation (EC) No. 1272/2008 (CLP)

Flam. Liq. 3; H226 Asp. Tox. 1; H304 Skin Irrit. 2; H315 Acute Tox. 4; H332 Carc. 2; H351 STOT RE 2; H373 (Thymus, Liver, Bone marrow) Aquatic Chronic 2; H411

According to Regulation (EC) No. 1272/2008 (CLP) V3018-Gasoil-Fuels, diesel

DANGER

H226: Flammable liquid and vapour. H304: May be fatal if swallowed and enters airways.

2.2 Label elements Product description

Hazard Pictogram(s)

Signal Word(s)

Hazard Statement(s)

Revision: 24 March 2023 Version: 005

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

	H315: Causes skin irritation. H332: Harmful if inhaled. H351: Suspected of causing cancer. H373: May cause damage to organs through prolonged or repeated exposure: Thymus, Liver, Bone marrow H411: Toxic to aquatic life with long lasting effects.
Precautionary Statement(s)	 P210: Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. P260: Do not breathe dust/fume/gas/mist/vapours/spray. P273: Avoid release to the environment. P280: Wear protective gloves/protective clothing/eye protection/face protection. P301+P310: IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician. P331: Do NOT induce vomiting.
Other hazards	May form explosive mixture with air. The vapour is heavier than air; beware of pits and confined spaces. May cause irritation to eyes and air passages. Product may release Hydrogen Sulphide: A specific assessment of inhalation risks from the presence of hydrogen sulphide in tank headspaces, confined spaces, product

residue, tank waste and waste water, and unintentional releases should be made

to help determine controls appropriate to local circumstances.

SECTION 3: COMPOSITION/INFORMATION ON INGREDIENTS

3.1 Substances

SUBSTANCE	CAS No.	EC No.	%W/W
Diesel fuel	68334-30-5	269-822-7	100

SECTION 4: FIRST AID MEASURES

2.3

4.1	Description of first aid measures	
	Self-protection of the first aider	Eliminate sources of ignition. If it is suspected that fumes are still present, the responder should wear an appropriate mask or self-contained breathing apparatus. Drench contaminated clothing with water before removing to avoid risk of sparks from static electricity. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Avoid all contact. Do not ingest. If swallowed then seek immediate medical assistance.
	H2S Warning:	Hydrogen sulphide (H2S) can accumulate in the headspace of storage tanks and reach potentially hazardous concentrations.
		If there is any suspicion of inhalation: A self contained breathing apparatus should be worn. Remove to fresh air immediately.
	Inhalation	IF INHALED: If breathing is difficult, remove victim to fresh air and keep at rest in a position comfortable for breathing. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical advice/attention if you feel unwell.
	Skin contact	IF ON SKIN (or hair): Remove contaminated clothing immediately and wash affected skin with plenty of water or soap and water. If irritation (redness, rash, blistering) develops, get medical attention.
	Eye contact	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists, get medical advice/attention.
	Ingestion	IF SWALLOWED: Do not induce vomiting because of risk of aspiration into the lungs. If vomiting occurs spontaneously, keep head below hips to prevent aspiration. If unconscious, place in recovery position and get medical attention

Revision: 24 March 2023 Version: 005

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

Vitol Fuels, diesel V3018

- 4.2 Most important symptoms and effects, both acute and delayed
- 4.3 Indication of any immediate medical attention and special treatment needed Notes to a physician:

immediately. Do not give anything by mouth to an unconscious person. Get medical attention immediately. Do not wait for symptoms to appear.

Irritation of the respiratory tract. Causes skin irritation. May cause eye irritation. Aspiration into the lungs may cause chemical pneumonitis, which can be fatal. Ingestion may cause irritation of the gastrointestinal tract. Nausea, vomiting and diarrhoea.

Treat symptomatically.

IF INHALED: If unconscious, place in recovery position and get medical attention immediately. Administer oxygen if available and artificial respiration if necessary. IF SWALLOWED: Do not induce vomiting because of risk of aspiration into the lungs. If aspiration is suspected obtain immediate medical attention. If vomiting occurs spontaneously, keep head below hips to prevent aspiration into the lungs.

Extinguish with sand or dry chemical. Foam, Carbon dioxide, Water fog or dry

SECTION 5: FIREFIGHTING MEASURES

Unsuitable extinguishing media

5.1	Extinguishing media
	Suitable extinguishing media

powder. Do not use water jet. Direct water jet may spread the fire.

Special hazards arising from the substance or Flammable liquid and vapour. Will float and can be reignited on surface water. Decomposes in a fire giving off toxic fumes: A mixture of solid and liquid particulates and gases including unidentified organic and inorganic compounds. May form explosive mixture with air. Prevent liquid entering sewers, basements and any watercourses. Vapours are heavier than air and may travel considerable distances to a source of ignition and flashback. If sulphur compounds are present

(sulfur oxides) or sulfuric acid.

5.3 Advice for firefighters

mixture

5.2

Fight fire with normal precautions from a reasonable distance. Fire fighters should wear complete protective clothing including self-contained breathing apparatus. Keep containers cool by spraying with water if exposed to fire. Avoid release to

in appreciable amounts, combustion products may include also H2S and SOx

the environment. Dike fire control water for later disposal. SECTION 6: ACCIDENTAL RELEASE MEASURES 6.1 Personal precautions, protective equipment and Caution - spillages may be slippery. Ensure operatives are trained to minimise emergency procedures exposures. Ensure suitable personal protection during removal of spillages. Eliminate sources of ignition. Shut off leaks if without risk. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Avoid all contact with substance. Ensure adequate ventilation. Do not breathe vapour. Do not ingest. If swallowed then seek immediate medical assistance. Do not use sparking tools. Use non-sparking ventilation systems, approved explosion-proof equipment, and intrinsically safe electrical systems. H2S Warning: Product may release Hydrogen Sulphide. Exposure controls - These controls may include: Segregation of areas, Access only to authorised persons, Permit to work systems, Confined space working procedures, Area H2S alarms, Personal H2S alarms, Personal escape sets, H2S awareness training. Please see section 8 for appropriate personal protection equipment. Small spillages: Wear flame-resistant antistatic protective clothing. Large spillages: Evacuate the area and keep personnel upwind. Drench contaminated clothing with water before removing to avoid risk of sparks from static electricity. Avoid all contact. Wear chemical protection suit and breathing apparatus. See Also Section: 8 6.2 Environmental precautions Avoid release to the environment. Do not allow to enter drains, sewers or watercourses. Spillages or uncontrolled discharges into watercourses must be alerted to the Environment Agency or other appropriate regulatory body. If necessary: Dike area to contain the spill and prevent releases to sewers, drains, or other waterways.

Revision: 24 March 2023 Version: 005

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

6.3 Methods and material for containment and cleaning up	Provided it is safe to do so, isolate the source of the leak. Use non-sparking equipment when picking up flammable spill. The vapour is heavier than air; beware of pits and confined spaces. Ensure that the equipment is adequately grounded. Allow small spillages to evaporate provided there is adequate ventilation. Wear flame-resistant antistatic protective clothing. Wear chemical protection suit and breathing apparatus.
Spillages onto land:	In case of soil contamination, remove contaminated soil and treat in accordance with local regulations. Adsorb spillages onto sand, earth or any suitable adsorbent material. Transfer to a lidded container for disposal or recovery. Dispose of this material and its container as hazardous waste. Small spillages: Allow small spillages to evaporate provided there is adequate ventilation. Wear flame-resistant antistatic protective clothing. Large spillages: Cover spillage with foam to reduce evaporation. Do not use water jet.
Spillages on water or at sea:	Collect as much as possible in clean container for reuse or disposal. Small spillages: Contain product with floating barriers or other equipment. Collect spilled product by absorbing with specific floating absorbents. Large spillages: Open waters should be contained with floating barriers or other mechanical means and recovered, only if this is strictly necessary and if fire/explosion risks can be adequately prevented. Otherwise control the spreading of the spillage, and let the substance evaporate naturally.
6.4 Reference to other sections	See Section: 8,13

SECTION 7: HANDLING AND STORAGE 7.1 Precautions for safe handling Obtain special instructions before use. Keep away from sources of ignition. - No smoking. Use only outdoors or in a well-ventilated area. Prevent vapour build up by providing adequate ventilation during and after use. May form explosive mixture with air. Take action to prevent static discharges. Use non-sparking tools. All parts of the plant and equipment should be electrically bonded together and connected to earth. Electrical continuity should be checked at regular intervals. Antistatic clothing and footwear should be used. The vapour is heavier than air; beware of pits and confined spaces. Avoid all contact with substance. Do not ingest. If swallowed then seek immediate medical assistance. Do not breathe vapour. See Section: 8. Keep good industrial hygiene. Wash hands thoroughly after handling. Contaminated clothing should be thoroughly cleaned. H2S Warning: Product may release Hydrogen Sulphide: A specific assessment of inhalation risks from the presence of hydrogen sulphide in tank headspaces, confined spaces, product residue, tank waste and waste water, and unintentional releases should be made to help determine controls appropriate to local circumstances. These controls may include: Segregation of areas, Access only to authorised persons, Permit to work systems, Confined space working procedures, Area H2S alarms, Personal H2S alarms, Personal escape sets, H2S awareness training. 7.2 Conditions for safe storage, including any Light hydrocarbon vapours can build up in the headspace of containers. These incompatibilities can cause flammability / explosion hazards. Bund storage facilities to prevent soil and water pollution in the event of spillage. Keep only in original packaging. Keep containers properly sealed when not in use. Protect from sunlight. Containers of this material may be hazardous when empty since they retain product residue. Empty container may contain product residue which may result in flammable or explosive vapours inside the container. Stable at ambient temperatures. Storage temperature Storage measures Suitable containers: Mild steel, Stainless steel. Unsuitable containers: Synthetic materials Incompatible materials Keep away from oxidising agents. Strong acids and Alkalis. 7.3 Specific end use(s) See Section: 1.2 and/or Exposure Scenario

SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 Control parameters

8.1.1 Occupational exposure limits

Not established

Revision: 24 March 2023 Version: 005

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

8.1.2 Biological limit value

Not established

8.1.3 PNECs and DNELs

PNEC: Fuels, Diesel is a hydrocarbon UVCB. The hydrocarbon block method is used in PETRORISK to calculate the environmental toxicity (HC5) of each group of components in the substance. These are used to estimate the environmental risk for the substance. Therefore a PNEC is not available for Fuels, Diesel for individual environmental compartments.

Diesel fuel Derived No-Effect Level	Oral	Inhalation	Dermal
Industry - Short term - Systemic effects	-	4300 mg/m ³	-
Industry - Long Term - Systemic effects	-	68 mg/m³	2.9 mg/kg bw/day
Consumer - Long Term - Systemic effects	-	20 mg/m ³	1.3 mg/kg bw/day

8.2 Exposure controls

8.2.1 Appropriate engineering controls

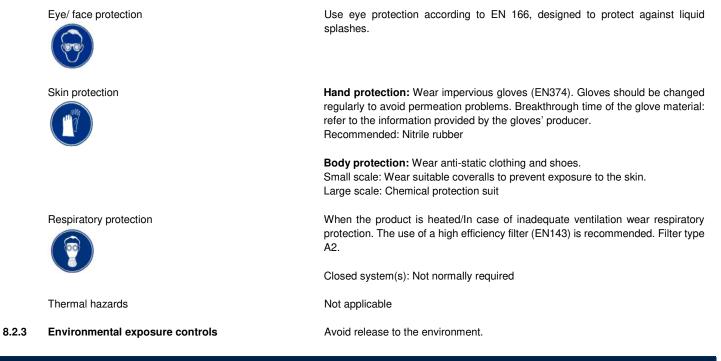

Provide adequate ventilation, including appropriate local extraction if dusts, fumes or vapours are likely to be evolved. Store in a cool/low-temperature, wellventilated (dry) place away from heat and ignition sources. Guarantee that the eye flushing systems and safety showers are located close to the working place.

8.2.2 Individual protection measures, such as personal protective equipment

Fuels are typically used, transferred and transported in closed systems. If exposure is likely (i.e. during sampling) the following advice may be appropriate. Keep good industrial hygiene. Always wash hands before smoking, eating and drinking. Do not eat, drink or smoke at the work place.

Refer to annexes for exposure scenarios detailing use specific exposure controls.

Protective clothing should be selected specifically for the working place, depending on concentration and quantity of the hazardous substances handled. The resistance of the protective clothing to chemicals should be ascertained with the respective supplier.

SECTION 10: STABILITY AND REACTIVITY

10.1	Reactivity
10.2	Chemical stability
10.3	Possibility of hazardous reactions
10.4	Conditions to avoid
10.5	Incompatible materials
10.6	Hazardous decomposition products

Stable under normal conditions. Reacts with - Strong oxidising agents Stable under normal conditions. Hazardous polymerisation will not occur. Product may release Hydrogen Sulphide.

Vapour may create explosive atmosphere.

Extremely flammable liquid and vapour. May form explosive mixture with air. Vapours are heavier than air and may travel considerable distances to a source of ignition and flashback. Product may release Hydrogen Sulphide. Elevated temperature. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Keep away from direct sunlight. Keep away from oxidising agents. Strong acids and Alkalis.

A mixture of solid and liquid particulates and gases including unidentified organic and inorganic compounds. Decomposes in a fire giving off toxic fumes: COx, H2S, Sox.

SECTION 11: TOXICOLOGICAL INFORMATION

11.1	Information on hazard classes as defined in Regulation (EC) No 1272/2008 Acute toxicity - Ingestion	All test data taken from existing ECHA registrations for the substances mentioned. Based upon the available data, the classification criteria are not met. LD50 (oral,rat) mg/kg: >5000 (OECD 401)
	Acute toxicity - Inhalation	Acute Tox. 4: Harmful if inhaled. LC50 (inhalation,rat) mg/l/4h: 5.4 (OECD 403)
	Acute toxicity - Skin contact	Based upon the available data, the classification criteria are not met. LD50 (skin,rabbit) mg/kg: >4300 (OECD 434)
	Skin corrosion/irritation	Skin Irrit. 2; Causes skin irritation. Irritating to skin. (rabbit) (OECD 404)
	Serious eye damage/irritation	Based upon the available data, the classification criteria are not met. Not irritating to eyes. (rabbit) (OECD 405)
	Respiratory or skin sensitisation	Based upon the available data, the classification criteria are not met. Sensitisation (guinea pig) – Negative (OECD 406)
	Germ cell mutagenicity	Based upon the available data, the classification criteria are not met. In vitro: Negative (OECD 476) In vivo: Negative (mouse) (OECD 475)
	Carcinogenicity	Carc. 2: May cause cancer. ECHA Registration Endpoint summary: According to EU CLP Classification (EC no. 1272/2008), VGO/Hydrocracked/Distillate fuels are classified for this endpoint.
	Reproductive toxicity	Based upon the available data, the classification criteria are not met. Reproductive toxicity: Negative (rat) (OECD 415) Developmental toxicity: Negative (rat) (OECD 414)

Revision: 24 March 2023 Version: 005

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

11.2	Information on other hazards	
11.2.1	Endocrine disrupting properties	This product does not contain a substance that has endocrine disrupting
		properties with respect to humans as no components meets the criteria.
11.2.2	Other information	None known
0-0-0-0		
SECTIO	IN 12: ECOLOGICAL INFORMATION	
10.1	Tevicity	Anustia Churnia 1. Tavia ta anustia lifa utita lang lasting affasta

12.1	Toxicity	Aquatic Chronic 1; Toxic to aquatic life with long lasting effects.
	Short Term (acute):	LL50 (Fish) (96 hour) 21 mg/l (OECD 203)
	Long term (chronic):	The aquatic toxicity was estimated using the PETROTOX computer model.
		Estimated NOEL: 0.083 mg/l
12.2	Persistence and degradability	Readily biodegradable (according to OECD criteria).
12.3	Bioaccumulative potential	The product has moderate potential for bioaccumulation. Partition coefficient n-
		octanol/water (log P O/W) \geq 3
12.4	Mobility in soil	The product is predicted to have low mobility in soil. Liquid with low volatility.
12.5	Results of PBT and vPvB assessment	Not classified as PBT or vPvB. None of the substances in this product fulfil the
		criteria for being regarded as a PBT or vPvB substance.
12.6	Endocrine disrupting properties	This product does not contain a substance that has endocrine disrupting
		properties with respect to humans as no components meets the criteria.
12.7	Other adverse effects	None known

SECTION 13: DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

Do not empty into drains, dispose of this material and its container at hazardous or special waste collection point. Disposal should be in accordance with local, state or national legislation. Containers of this material may be hazardous when empty since they retain product residue. Containers must not be punctured or destroyed by burning, even when empty. Allocation of a waste code number, according to the European Waste Catalogue, should be carried out in agreement with the regional waste disposal company. Waste code: Fuel Oil (13 07 01) and Diesel fuel (15 01 10). HP3, HP4, HP5, HP6, HP7, HP14

Waste classification according to Directive 2008/98/EC (Waste Framework Directive)

2.1 Control of worker exposure				
Product characteristics				
Physical form of product	Liquid With potential for aero	osol generation		
Vapour pressure	<0.5 kPa @ STP			
Concentration of substance in product	Covers concentrations up to	Covers concentrations up to 100%		
Human factors not influenced by risk m	anagement			
Potential exposure area	Not defined			
Frequency and duration of use	·			
Exposure duration per day	Covers daily exposures up to	o 8 hours (unless stated differently).		
Exposure duration per year	300			
Other operational conditions affecting worker exposure				
Area of use	All contributing scenarios	Indoor		
Characteristics of the surroundings	Not defined			

General measures applicable to all activities

Assumes a good basic standard of occupational hygiene is implemented. Assumes use at not more than 20°C above ambient temperature, unless stated differently. Control any potential exposure using measures such as contained or enclosed systems, properly designed and maintained facilities and a good standard of general ventilation. Drain down systems and clear transfer lines prior to breaking containment. Drain down and flush equipment where possible prior to maintenance. Where there is potential for exposure: Ensure relevant staff are informed of the nature of exposure and aware of basic actions to minimise exposures; Ensure suitable personal protective equipment is available; Clear up spills and dispose of waste in accordance with regulatory requirements; monitor effectiveness of control measures; consider the need for health surveillance; identify and implement corrective actions.

General measures (skin irritants)

Avoid direct skin contact with product. Identify potential areas for indirect skin contact. Wear gloves (tested to EN374) if hand contact with substance likely. Clean up contamination/spills as soon as they occur. Wash off any skin contamination immediately. Provide basic employee training to prevent/minimise exposures and to report any skin problems that may develop.

Organisational measures

PROC8a (Maintenance)	Drain down and flush system prior to equipment break-in or maintenance. Equivalent to LEV - Efficiency of at least: 80%
Technical conditions of use	

Revision: 24 March 2023 Version: 005

Risk management measures related to human health Respiratory protection No special measures are required. PROC & (Buik closed) PROC & (Buik closed) Vear suitable gloves tested to EN374, - efficiency of at least 80% (Janitonance) Wear suitable gloves tested to EN374, - efficiency of at least 90% Eye Protection No special measures are required. Wear chemically resistant gloves (tested to EN374) in combination with basic employee training, - efficiency of at least 90% Additional good practice advice beyond the REACH CSA. Obligations according to Article 37(4) of REACH do not apply Wear suitable gloves tested to EN374. Ensure material transfers are under containment or extract ventilation. Clear splits immediately. Clear splits immediately. Transfer via enclosed lines Avoid dip sampling. (PROC 8 – Sampling) Readicated fill points supplied with local extract ventilation. 3.2 Environmental exposure prediction

Exposure assessment (method/calculation model)

The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.

Fuels, Diesel is a hydrocarbon UVCB. The hydrocarbon block method is used in PETRORISK to calculate the environmental toxicity (HC5) of each group of components in the substance. These are used to estimate the environmental risk for the substance. Therefore a PNEC is not available for Fuels, Diesel for individual environmental compartments.

environmental exposure	STP	freshwater	marine water	soil	freshwater sediment	marine sediment

General measures applicable to all activities					

General measures applicable to all activities

Assumes a good basic standard of occupational hygiene is implemented. Assumes use at not more than 20°C above ambient temperature, unless stated differently. Control any potential exposure using measures such as contained or enclosed systems, properly designed and maintained facilities and a good standard of general ventilation. Drain down systems and clear transfer lines prior to breaking containment. Drain down and flush equipment where possible prior to maintenance. Where there is potential for exposure: Ensure relevant staff are informed of the nature of exposure and aware of basic actions to minimise exposures; Ensure suitable personal protective equipment is available; Clear up spills and dispose of waste in accordance with regulatory requirements; monitor effectiveness of control measures; consider the need for health surveillance; identify and implement corrective actions.

General measures (skin irritants)

Avoid direct skin contact with product. Identify potential areas for indirect skin contact. Wear gloves (tested to EN374) if hand contact with substance likely. Clean up contamination/spills as soon as they occur. Wash off any skin contamination immediately. Provide basic employee training to prevent/minimise exposures and to report any skin problems that may develop.

3.2 Environmental exposure prediction

Exposure assessment (method/calculation model)

The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.

Fuels, Diesel is a hydrocarbon UVCB. The hydrocarbon block method is used in PETRORISK to calculate the environmental toxicity (HC5) of each group of components in the substance. These are used to estimate the environmental risk for the substance. Therefore a PNEC is not available for Fuels, Diesel for individual environmental compartments.

environmental exposure	STP	freshwater	marine water	soil	freshwater sediment	marine sediment
Predicted					Seument	
Environmental	0.3 mg/l	0.03 mg/l	0.003 mg/l	0.05 mg/kg ww	0.7 mg/kg ww	0.07 mg/kg ww
Exposure (PEC)	0	0	0	0.0	0 0	0 0
Risk characterisation ratio (RCR)	0.2	0.75	0.075	0.009	0.91	0.091

Indirect exposure to humans via the environment:

Exposure route	Exposure estimation (μg/kg/day)	Risk characterisation ratio (RCR)
Oral	35.6	0.03
Inhalation	82	0.014

4. Evaluation guidanc	e to downstream user
For scaling see	Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).
Health	Predicted exposures are not expected to exceed the applicable consumer reference values when the operational conditions/risk management measures given in section 2 are implemented. Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. Available hazard data do not allow the derivation of a DNEL for eye or respiratory tract irritant effects. Risk Management Measures are based on qualitative risk characterisation.
Environment	Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using on-site technologies, either alone or in combination.

Characteristics of the surroundings	Not defined			
General measures applicable to all activities				

al measures applicable to all activities

Assumes a good basic standard of occupational hygiene is implemented. Assumes use at not more than 20°C above ambient temperature, unless stated differently. Control any potential exposure using measures such as contained or enclosed systems, properly designed and maintained facilities and a good standard of general ventilation. Drain down systems and clear transfer lines prior to breaking containment. Drain down and flush equipment where possible prior to maintenance. Where there is potential for exposure: Ensure relevant staff are informed of the nature of exposure and aware of basic actions to minimise exposures; Ensure suitable personal protective equipment is available; Clear up spills and dispose of waste in accordance with regulatory requirements; monitor effectiveness of control measures; consider the need for health surveillance; identify and implement corrective actions.

General measures (skin irritants)

Avoid direct skin contact with product. Identify potential areas for indirect skin contact. Wear gloves (tested to EN374) if hand contact with substance likely. Clean up contamination/spills as soon as they occur. Wash off any skin contamination immediately. Provide basic employee training to prevent/minimise exposures and to report any skin problems that may develop.

Organisational measures	
PROC8a (Maintenance)	Drain down and flush system prior to equipment break-in or maintenance. Equivalent to LEV - Efficiency of at least: 80%
BBOCSh (Drum/batah transform)	
PROC8b (Drum/batch transfers) Technical conditions of use	Transfer substance using closed system e.g. using drum pump. (Efficiency of at least: 80%)
	1
PROC1 (Storage)	Handle substance within a closed system.
PBOC16	In case of Indoor use: Provide a good standard of general ventilation (not less than 3 to 5 air
	changes per hour). Efficiency of at least: 30%

Revision: 24 March 2023 Version: 005

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

Risk management measures related to human health Respiratory protection No special measures are required. PROC8b (bulk), PROC 8b (Drum/batch transfers), Wear suitable gloves tested to EN374. - efficiency of at least 80% Hand and/or Skin protection PROC8b (refuelling) Wear chemically resistant gloves (tested to EN374) in combination PROC8a (Maintenance) with 'basic' employee training. - efficiency of at least 90% Eye Protection No special measures are required. Additional good practice advice beyond the REACH CSA. Obligations according to Article 37(4) of REACH do not apply Provide a good standard of general ventilation (not less than 3 to 5 air changes per hour). Wear suitable gloves tested to EN374. Ensure material transfers are under containment or extract ventilation. Avoid spillage when withdrawing pump. Clear transfer lines prior to de-coupling. Clear spills immediately. Transfer via enclosed lines Retain drain downs in sealed storage pending disposal or for subsequent recycle. Apply vessel entry procedures including use of forced supplied air. Wear suitable coveralls to prevent exposure to the skin. (PROC 8a - Maintenance) 2.2 Control of environmental exposure Amounts used Fraction of EU tonnage used in region: 0.1 Regional use tonnage (tons/year): 6.9E+06 Fraction of Regional tonnage used locally: tons/year 5.0E-04 Annual site tonnage (tons/year): 3.4E+03 Maximum daily site tonnage (kg/day): 9.4E+03 Environment factors not influenced by risk management Not defined (default = 18,000) Flow rate of receiving surface water (m³/d): Local freshwater dilution factor: 10 100 Local marine water dilution factor: **Operational conditions** 365 Emission days (days/year): Release fraction to air from process (initial release prior to 0.001 RMM): Release fraction to wastewater from process (initial release prior 1.0E-05 to RMM): Release fraction to soil from process (initial release prior to 1.0E+05 RMM): Note: Common practices vary across sites thus conservative process release estimates used. Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil Treat air emission to provide a typical removal efficiency of (%): 0 Treat onsite wastewater (prior to receiving water discharge) to 62.9 provide the required removal efficiency of (%): If discharging to domestic sewage treatment plant, provide the 0 required onsite wastewater removal efficiency of m³ (%): Treat soil emission to provide a typical removal efficiency of (%): Not defined Organisational measures to prevent/limit release from site Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.
