ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

Hazard Pictogram(s) Signal Word(s) Danger Hazard Statement(s) H224: Extremely flammable liquid and vapour. H304: May be fatal if swallowed and enters airways. H315: Causes skin irritation. H340: May cause genetic defects. H350: May cause cancer. H361fd: Suspected of damaging fertility. Suspected of damaging the unborn child. H336: May cause drowsiness or dizziness. (central nervous system, inhalation) H411: Toxic to aquatic life with long lasting effects. Precautionary Statement(s) P201: Obtain special instructions before use. P210: Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. P273: Avoid release to the environment. P280: Wear protective gloves/protective clothing/eye protection/face protection/hearing protection. P301+P310: IF SWALLOWED: Immediately call a POISON CENTER/doctor. P331: Do NOT induce vomiting. P403+P233: Store in a well-ventilated place. Keep container tightly closed. 2.3 Other hazards May form explosive mixture with air. The vapour is heavier than air; beware of pits and confined spaces. May cause irritation to eyes and air passages. Product may release Hydrogen Sulphide: A specific assessment of inhalation risks from the presence of hydrogen sulphide in tank headspaces, confined spaces, product residue, tank waste and waste water, and unintentional releases

SECTION 4: FIRST AID MEASURES

Description of first aid measures Self-protection of the first aider

H2S Warning:

Eliminate sources of ignition. If it is suspected that fumes are still present, the responder should wear an appropriate mask or self-contained breathing apparatus. Drench contaminated clothing with water before removing to avoid risk of sparks from static electricity. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Avoid all contact. Do not ingest. If swallowed then seek immediate medical assistance.

should be made to help determine controls appropriate to local circumstances.

Hydrogen sulphide (H2S) can accumulate in the headspace of storage tanks and reach potentially hazardous concentrations.

If there is any suspicion of inhalation: A self contained breathing apparatus should be worn. Remove to fresh air immediately.

Revision: 1st March 2023 Version: 005

4.2

4.3

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

inhalation	IF INHALED: If breathing is difficult, remove victim to fresh air and keep at rest in
	a position comfortable for breathing. Maintain an open airway. Loosen tight
	clothing such as a collar, tie, belt or waistband. Get medical advice/attention if you
	feel unwell.
Skin contact	IF ON SKIN (or hair): Remove contaminated clothing immediately and wash
	affected skin with plenty of water or soap and water. If irritation (redness, rash,
	blistering) develops, get medical attention.
Eye contact	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact
	lenses, if present and easy to do. Continue rinsing. If eye irritation persists, get
	medical advice/attention.
Ingestion	IF SWALLOWED: Do not induce vomiting because of risk of aspiration into the
	lungs. If vomiting occurs spontaneously, keep head below hips to prevent
	aspiration into the lungs. If unconscious, place in recovery position and get
	medical attention immediately. Do not give anything by mouth to an unconscious
Mastimus when the mentance and offer the beth south	person. Get medical attention immediately. Do not wait for symptoms to appear.
Most important symptoms and effects, both acute	inhalation: May cause drowsiness or dizziness. Headache, nausea and vomiting. Skin contact: Causes skin irritation.
and delayed	
	Eye contact: Causes serious eye irritation. Ingestion: Aspiration into the lungs may cause chemical pneumonitis, which
	can be fatal. Ingestion may cause irritation of the gastrointestinal tract. Nausea,
	Vomiting and Diarrhoea
Indication of any immediate medical attention and	Treat symptomatically.
special treatment needed	Teat Symptomatically
Notes to a physician:	IF INHALED: If unconscious, place in recovery position and get medical attention
	immediately. Administer oxygen if available and artificial respiration if necessary.
	IF SWALLOWED: Do not induce vomiting because of risk of aspiration into the
	in other least the induce termining because of how of appraiser into the

SECTION 5: FIREFIGHTING MEASURES

5.1	Extinguishing media Suitable extinguishing media	Extinguish with sand or dry chemical. Foam, Carbon dioxide, Water fog or dry powder
	Unsuitable extinguishing media	Do not use water jet. Direct water jet may spread the fire.
5.2	Special hazards arising from the substance or mixture	Extremely flammable liquid and vapour. Will float and can be reignited on surface water. Decomposes in a fire giving off toxic fumes: A mixture of solid and liquid particulates and gases including unidentified organic and inorganic compounds. May form explosive mixture with air. Prevent liquid entering sewers, basements and any watercourses. Vapours are heavier than air and may travel considerable distances to a source of ignition and flashback. If sulphur compounds are present in appreciable amounts, combustion products may include also H2S and SOX (sulfur oxides) or sulfuric acid
5.3	Advice for firefighters	Fight fire with normal precautions from a reasonable distance. Fire fighters should wear complete protective clothing including self-contained breathing apparatus. Keep containers cool by spraying with water if exposed to fire. Avoid release to the environment. Dike fire control water for later disposal.

SECTION 6: ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures Caution - spillages may be slippery. Ensure operatives are trained to minimise exposures. Ensure suitable personal protection during removal of spillages. Eliminate sources of ignition. Shut off leaks if without risk. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Avoid all contact with substance. Ensure adequate ventilation Do not breathe vapour. Do not ingest. If swallowed then seek immediate medical assistance. Do not use sparking tools. Use non-sparking ventilation systems, approved explosion-proof equipment, and intrinsically safe electrical systems.

lungs. If aspiration is suspected obtain immediate medical attention. If vomiting occurs spontaneously, keep head below hips to prevent aspiration into the lungs.

Revision: 1st March 2023 Version: 005

ACCORDING TO EC-REGULATIONS 1907/2006	(REACH)	1272/2008	(CLP)	8 2020/878
ACCOLUNA TO EC-ILEGOLATIONS 1301/2000		, 1212/2000		

	H2S Warning: Small spillages: Large spillages:	Product may release Hydrogen Sulphide. Exposure controls - These controls may include: Segregation of areas, Access only to authorised persons, Permit to work systems, Confined space working procedures, Area H2S alarms, Personal H2S alarms, Personal escape sets, H2S awareness training. Please see section 8 for appropriate personal protection equipment Wear flame-resistant antistatic protective clothing. Evacuate the area and keep personnel upwind. Drench contaminated clothing with water before removing to avoid risk of sparks from static electricity. Avoid all
		contact. Wear chemical protection suit and breathing apparatus. See Also Section: 8.
6.2	Environmental precautions	Avoid release to the environment. Do not allow to enter drains, sewers or watercourses. Spillages or uncontrolled discharges into watercourses must be alerted to the Environment Agency or other appropriate regulatory body. If necessary: Dike area to contain the spill and prevent releases to sewers, drains, or other waterways.
6.3	Methods and material for containment and cleaning up	Provided it is safe to do so, isolate the source of the leak. Use non-sparking equipment when picking up flammable spill. The vapour is heavier than air; beware of pits and confined spaces. Ensure that the equipment is adequately grounded. Allow small spillages to evaporate provided there is adequate ventilation. Wear flame-resistant antistatic protective clothing. Wear chemical protection suit and breathing apparatus.
	Spillages onto land:	In case of soil contamination, remove contaminated soil and treat in accordance with local regulations.Adsorb spillages onto sand, earth or any suitable adsorbent material. Transfer to a lidded container for disposal or recovery. Dispose of this material and its container as hazardous waste Small spillages: Allow small spillages to evaporate provided there is adequate ventilation. Wear flame-resistant antistatic protective clothing. Large spillages: Cover spillage with foam to reduce evaporation. Do not use water jet.
	Spillages on water or at sea:	Collect as much as possible in clean container for reuse or disposal. Small spillages: Contain product with floating barriers or other equipment. Collect spilled product by absorbing with specific floating absorbents. Large spillages: Open waters should be contained with floating barriers or other mechanical means and recovered, only if this is strictly necessary and if fire/explosion risks can be adequately prevented. Otherwise control the spreading of the spillage, and let the substance evaporate naturally.
6.4	Reference to other sections	See Section: 8,13

SECTION 7: HANDLING AND STORAGE

Obtain special instructions before use. Keep away from sources of ignition - No 7.1 Precautions for safe handling smoking. Use only outdoors or in a well-ventilated area. Prevent vapour build up by providing adequate ventilation during and after use. May form explosive mixtures with air. Take action to prevent static discharges. Use non-sparking tools. All parts of the plant and equipment should be electrically bonded together and connected to earth. Electrical continuity should be checked at regular intervals. Antistatic clothing and footwear should be used. The vapour is heavier than air; beware of pits and confined spaces. Avoid all contact with substance. Do not ingest. If swallowed then seek immediate medical assistance. Do not breathe vapour. See Section: 8. Keep good industrial hygiene. Wash hands thoroughly after handling. Contaminated clothing should be thoroughly cleaned. H2S Warning: Product may release Hydrogen Sulphide: A specific assessment of inhalation risks from the presence of hydrogen sulphide in tank headspaces, confined spaces, product residue, tank waste and waste water, and unintentional releases should be made to help determine controls appropriate to local circumstances. These controls may include: Segregation of areas, Access only to authorised persons, Permit to work systems, Confined space working procedures, Area H2S

alarms, Personal H2S alarms, Personal escape sets, H2S awareness training.

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

7.2	Conditions for safe storage, including any
	incompatibilities

Light hydrocarbon vapours can build up in the headspace of containers. These can cause flammability / explosion hazards. Bund storage facilities to prevent soil and water pollution in the event of spillage. Keep only in original packaging. Keep containers properly sealed when not in use. Protect from sunlight. Containers of this material may be hazardous when empty since they retain product residue. Empty container may contain product residue which may result in flammable or explosive vapours inside the container.

storage temperature	
Storage measures	

Incompatible materials7.3 Specific end use(s)

Stable at ambient temperatures. Suitable containers: Stainless steel, Mild steel Do not store in: Synthetic materials Keep away from oxidising agents. See Section: 1.2 and/or Exposure Scenario.

SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

- 8.1 Control parameters
- 8.1.1 Occupational exposure limits
- 8.1.2 Biological Limit Value
- 8.1.3 PNECs and DNELs

No Occupational Exposure Limit assigned. Users are advised to consider national Occupational Exposure Limits or other equivalent values.

Not established

PNEC: Not established Naphtha (petroleum), full-range straight-run is a hydrocarbon UVCB. The hydrocarbon block method is used in PETRORISK to calculate the environmental toxicity (HC5) of each group of components in the substance. These are used to estimate the environmental risk for the substance. Therefore individual environmental compartments PNECs are not available for this product.

Consumer - acute - Local effects	-	640 mg/m ³	-

8.2 Exposure controls

- 8.2.1 Appropriate engineering controls
- 8.2.2 Individual protection measures, such as personal protective equipment

Provide adequate ventilation, including appropriate local extraction if dusts, fumes or vapours are likely to be evolved. Store in a cool/low-temperature, wellventilated (dry) place away from heat and ignition sources. Guarantee that the eye flushing systems and safety showers are located close to the working place.

Protective clothing should be selected specifically for the working place, depending on concentration and quantity of the hazardous substances handled. The resistance of the protective clothing to chemicals should be ascertained with the respective supplier.

Fuels are typically used, transferred and transported in closed systems. If exposure is likely (i.e. during sampling) the following advice may be appropriate. Keep good industrial hygiene. Always wash hands before smoking, eating and drinking. Do not eat, drink or smoke at the work place. Refer to annexes for exposure scenarios detailing use specific exposure controls

Eye / face protection

Use eye protection according to EN 166, designed to protect against liquid splashes.

Revision: 1st March 2023 Version: 005

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

	Skin protection	Hand protection: Wear impervious gloves (EN374). Gloves should be changed regularly to avoid permeation problems. Breakthrough time of the glove material: refer to the information provided by the gloves' producer. Recommended: Nitrile rubber.
		Body protection: Wear anti-static clothing and shoes. small scale: Wear suitable coveralls to prevent exposure to the skin. large scale: Chemical protection suit
	Respiratory protection	When the product is heated/In case of inadequate ventilation wear respiratory protection. The use of a high efficiency filter (EN143) is recommended. Filter type A1
		Closed system(s): Not normally required.
	Thermal hazards	not applicable
8.2.3	Environmental exposure controls	Avoid release to the environment.

SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES

9.1 Information on basic physical and chemical properties

Physical state	Liquid
Colour	Colourless
Odour	Hydrocarbon
Melting point/freezing point	< - 60 °C
Boiling point or initial boiling point and boiling range	< 35 °C
Flammability	not applicable - Liquid
Lower and upper explosion limit	Flammable Limits (Lower) (%v/v) 1.4
	Flammable Limits (Upper) (%v/v) 7.6
Flash point	< -40 °C
Auto-ignition temperature	> 220 °C
Decomposition temperature	Not established
рН	Not established
Kinematic viscosity	<1 mm²/s @ 20 °C
Solubility	Immiscible with water.
Partition coefficient: n-octanol/water (log value)	not applicable. Substance is complex UVCB.
Vapour pressure	4 - 240 kPa @ 37.8°C
Density and/or relative density	0.62 – 0.88 g/cm³ @ 15 °C
Relative vapour density	>2
Particle characteristics	Not established

9.2 Other information

None Known

SECTI	ON 10: STABILITY AND REACTIVITY	
10.1	Reactivity	Stable under normal conditions Reacts with - Strong oxidising agents
10.2	Chemical stability	Stable under normal conditions Hazardous polymerisation will not occur. Product may release Hydrogen Sulphide.
10.3	Possibility of hazardous reactions	Extremely flammable liquid and vapour. May form explosive mixture with air. Vapours are heavier than air and may travel considerable distances to a source of ignition and flashback. Product may release Hydrogen Sulphide.
10.4	Conditions to avoid	Elevated temperature. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Keep away from direct sunlight.
10.5	Incompatible materials	Keep away from oxidising agents. Strong Acids and Alkalis.
10.6	Hazardous decomposition products	A mixture of solid and liquid particulates and gases including unidentified organic and inorganic compounds. Decomposes in a fire giving off toxic fumes: COx, H2S, SOx,

SECTION	ON 12: ECOLOGICAL INFORMATION	
12.1	Toxicity Short Term (acute):	Aquatic Chronic 2; Toxic to aquatic life with long lasting effects. LL50 (Fish) (96hr) 10 mg/l (OCED 203)
	Long Term (Chronic):	According to the EU CLP Regulation (EC No. 1272/2008) criteria, substances in the low boiling point naphtha category are classified as Chronic Category 2 (H411) for the environment based on acute invertebrate and alga toxicity.
12.2	Persistence and degradability	Readily biodegradable. (OECD 301F)
12.3	Bioaccumulative potential	Substance is complex UVCB. The BCF (fish) of this substance components is well below the criteria for bioaccumulation. Therefore, this substance is not considered as bioaccumulative substance.(ECHA registration dossier: PBT assessment 2)
12.4	Mobility in soil	The product is predicted to have low mobility in soil. Immiscible with water.

Revision: 1st March 2023 Version: 005

SECTION 13: DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

None Known Dispose of this material and its container as hazardous waste Do not empty into drains, dispose of this material and its container at hazardous or special waste collection point. Disposal should be in accordance with local, state or national

legislation. Containers of this material may be hazardous when empty since they retain product residue. Containers must not be punctured or destroyed by burning, even when empty. Allocation of a waste code number, according to the European Waste Catalogue, should be carried out in agreement with the

Substance is complex UVCB. This substance does not contain PBT constituents

This substance does not have endocrine disrupting properties with respect to

included in the SVHC candidate list at concentrations above 0.1%.

regional waste disposal company. Waste code: 13 07 01

EU Waste Codes: HP3, HP4, HP7, HP10, HP11, HP14

Waste classification according to Directive 2008/98/EC (Waste Framework Directive)

Naphtha (petroleum), full-range straight-run is a hydrocarbon UVCB. The hydrocarbon block method is used in PETRORISK to calculate the environmental toxicity (HC5) of each group of components in the substance. These are used to estimate the environmental risk for the substance. Therefore individual environmental compartments PNECs are not available for this product.

Concentration: benzene (Worst case assumption. Contains benzene. @1%).

General measures (skin irritants)		

Avoid direct skin contact with product. Identify potential areas for indirect skin contact. Wear gloves (tested to EN374) if hand contact with substance likely. Clean up contamination/spills as soon as they occur. Wash off any skin contamination immediately. Provide basic employee training to prevent/minimise exposures and to report any skin problems that may develop.

General measures (carcinogens)

Revision: 1st March 2023 Version: 005

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

Consider technical advances and process upgrades (including automation) for the elimination of releases. minimise exposure using measures such as closed systems, dedicated facilities and suitable general/local exhaust ventilation. Drain down systems and clear transfer lines prior to breaking containment. Clean/flush equipment, where possible, prior to maintenance Where there is potential for exposure: restrict access to authorised persons; provide specific activity training to operators to minimise exposures; wear suitable gloves and coveralls to prevent skin contamination; wear respiratory protection when its use is identified for certain contributing scenario; clear up spills immediately and dispose of waste safely. Ensure safe systems of work or equivalent arrangements are in place to manage risks. Regularly inspect, test and maintain all control measures. Consider the need for risk based health surveillance.

3.2 Environmental exposure prediction

Exposure assessment (method/calculation model)

The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.

Naphtha (petroleum), full-range straight-run is a hydrocarbon UVCB. The hydrocarbon block method is used in PETRORISK to calculate the environmental toxicity (HC5) of each group of components in the substance. These are used to estimate the environmental risk for the substance. Therefore individual environmental compartments PNECs are not available for this product.

2.1 Control of worker exposure		
Product characteristics		
Physical form of product	Liquid with high volatility.	
Concentration of substance in product	Covers concentrations up	to 100% (≤ 1 % benzene content)
Human factors not influenced by risk manag	lement	
Potential exposure area	Not defined	
Frequency and duration of use		
Exposure duration per day	Covers daily exposures up	o to 8 hours (unless stated differently).
Frequency of use (days per year)	300	
Other operational conditions affecting work	er exposure	
Area af usa	PROC3	Outdoor
Area of use	All other PROC's	Not defined (default = Indoor)
Characteristics of the surroundings	Not defined	
General measures applicable to all activities Assumes a good basic standard of occupationa		activities are at ambient temperature (unless stated differently).
General measures (skin irritants)		
Avoid direct skin contact with product. Identify	potential areas for indirect skin cont	tact. Wear gloves (tested to EN374) if hand contact with substance
likely. Clean up contamination/spills as soon	as they occur. Wash off any skir	n contamination immediately. Provide basic employee training to
prevent/minimise exposures and to report any s	kin problems that may develop.	
General measures (carcinogens)		
Canaidar technical advances and process upor	adaa (including outomotion) for the	alimination of releases, minimize evenesure using measures such as

Consider technical advances and process upgrades (including automation) for the elimination of releases. minimise exposure using measures such as closed systems, dedicated facilities and suitable general/local exhaust ventilation. Drain down systems and clear transfer lines prior to breaking containment. Clean/flush equipment, where possible, prior to maintenance Where there is potential for exposure: restrict access to authorised persons; provide specific activity training to operators to minimise exposures; wear suitable gloves and coveralls to prevent skin contamination; wear respiratory protection when its use is identified for certain contributing scenario; clear up spills immediately and dispose of waste safely. Ensure safe systems of work or equivalent arrangements are in place to manage risks. Regularly inspect, test and maintain all control measures. Consider the need for risk based health surveillance.

Exposure assessment (method/calculation model)	The Hydrocarbon Block Method has been used to calculate
	environmental exposure with the Petrorisk model.
Naphtha (petroleum), full-range straight-run is a hydrocarbon UVCB. The H	hydrocarbon block method is used in PETRORISK to calculate the
environmental toxicity (HC5) of each group of components in the substance.	These are used to estimate the environmental risk for the substance.

Therefore individual environmental compartments PNECs are not available for this product.

Environmental exposure	STP	freshwater	marine water	soil	freshwater sediment	marine sediment
Predicted Environmental Exposure (PEC)	2.6E-05 mg/L	3.1E-03 mg/L	1.1E-05 mg/L	3.5E-03 mg/kg ww	0.15 mg/kg ww	4.5E-03 mg/kg ww
Risk characterisation ratio (RCR)	1.6E-06	0.011	3.1E-05	2.4E-05	4.3E-03	1.2E-05

Human exposure prediction:

Route of Exposure	Exposure (µg/kg ⁻¹ day ⁻¹)	Risk characterisation ratio (RCR)
oral	3.8	0.038
inhalation	0.54	5.8E-04

4.0 Evaluation guidance to downstream user			
For scaling see	are managed to at least equi Available hazard data do not Further details on scaling an industries-libraries.html).	support the need for a DNEL to be established for other health effects. d control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for- zene and assumes that the substance contains 1 % benzene. Arithmetic scaling may ains < 1 % benzene
