Revision: 4.1 Date: 10.06.2019

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2015/830

## SECTION 1: IDENTIFICATION OF THE SUBSTANCE/MIXTURE AND OF THE COMPANY/UNDERTAKING

1.1 Product identifier

Product Name Diesel Fuel

Product Description V3018-Gasoil-Fuels, diesel

 Trade Name
 Gasoil

 Product code
 Gasoil

 CAS No.
 68334-30-5

 EC No.
 269-822-7

REACH Registration No. -

1.2 Relevant identified uses of the substance or mixture

and uses advised against Identified Use(s)

No.	Exposure Scenario	Page:
1	Distribution of Fuels, Diesel	11
2	Formulation and (re)packing Fuels, Diesel	15
3	Use as a fuel (Industrial)	19
4	Use as a fuel (Professional)	22
5	Use as a fuel (Consumer)	26

Uses Advised Against Anything other than the above.

1.3 Details of the supplier of the safety data sheet

Company Identification Vitol SA

Place des Bergues 3 P.O. Box 2056 1211 Geneva 1 Switzerland

 Telephone
 +31 10 498 7200

 Fax
 +31 10 452 9545

 E-Mail (competent person)
 xrea ch@vitol.com

1.4 Emergency telephone number

Emergency Phone No. +44 (0) 1235 239 670, 24/7
Languages spoken All official European languages.

### **SECTION 2: HAZARDS IDENTIFICATION**

2.1 Classification of the substance or mixture

**2.1.1 Regulation (EC) No. 1272/2008 (CLP)** Flam. Liq. 3; H226

Asp. Tox. 1; H304 Skin Irrit. 2; H315 Acute Tox. 4; H332 Carc. 2; H351 STOT RE 2; H373 Aquatic Chronic 2; H411

2.2 Label elements According to Regulation (EC) No. 1272/2008 (CLP)

Product Name V3018-Gasoil-Fuels, diesel

Hazard Pictogram(s)

Signal Word(s) Danger

Page: 1 of 28

Precautionary Statement(s)

Revision: 4.1 Date: 10.06.2019

#### ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2015/830

Hazard Statement(s) H226: Flammable liquid and vapour.

H304: May be fatal if swallowed and enters airways.

H315: Causes skin irritation. H332: Harmful if inhaled.

H351: Suspected of causing cancer.

H373: May cause damage to organs through prolonged or repeated exposure:

Liver, Bone marrow and Thymus.

H411: Toxic to aquatic life with long lasting effects.

P210: Keep away from heat, hot surfaces, sparks, open flames and other

ignition sources. No smoking. P260: Do not breathe fume.

P280: Wear protective gloves/protective clothing/eye protection/face protection.

P301+P310: IF SWALLOWED: Immediately call a POISON CENTER or

doctor/physician.

P331: Do NOT induce vomiting.

P273: Avoid release to the environment.

2.3 Other hazards

May form explosive mixture with air. The vapour is heavier than air; beware of pits and confined spaces. May cause irritation to eyes and air passages.

Product may release Hydrogen Sulphide: A specific assessment of inhalation risks from the presence of hydrogen sulphide in tank headspaces, confined spaces, product residue, tank waste and waste water, and unintentional releases should be made to help determine controls appropriate to local

circumstances.

## **SECTION 3: COMPOSITION/INFORMATION ON INGREDIENTS**

#### 3.1 Substances

SUBSTANCE	CAS No.	EC No.	REACH Registration No.	%W/W
Fuels, diesel	68334-30-5	269-822-7	-	100

## **SECTION 4: FIRST AID MEASURES**

#### 4.1 Description of first aid measures

Self-protection of the first aider

Eliminate sources of ignition. If it is suspected that fumes are still present, the responder should wear an appropriate mask or self-contained breathing apparatus. Drench contaminated clothing with water before removing to avoid risk of sparks from static electricity. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Avoid all contact. Do not ingest. If swallowed then seek immediate medical assistance.

Hydrogen sulphide (H2S) can accumulate in the headspace of storage tanks and reach potentially hazardous concentrations.

If there is any suspicion of inhalation: A self contained breathing apparatus should be worn. Remove to fresh air immediately.

IF INHALED: If breathing is difficult, remove victim to fresh air and keep at rest in a position comfortable for breathing. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical advice/attention if you feel unwell.

IF ON SKIN (or hair): Remove contaminated clothing immediately and wash affected skin with plenty of water or soap and water. If irritation (redness, rash,

blistering) develops, get medical attention.

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists, get

medical advice/attention.

IF SWALLOWED: Do not induce vomiting because of risk of aspiration into the lungs. If vomiting occurs spontaneously, keep head below hips to prevent

Inhalation

H2S Warning:

Skin Contact

Eye Contact

Ingestion

Page: 2 of 28

Revision: 4.1 Date: 10.06.2019

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2015/830

4.2 Most important symptoms and effects, both acute and delayed

aspiration into the lungs. If unconscious, place in recovery position and get medical attention immediately. Do not give anything by mouth to an unconscious person. Get medical attention immediately. Do not wait for symptoms to appear.

Inhalation: Irritation of the respiratory tract.

Skin Contact: Causes skin irritation.

Eye Contact: May cause eye irritation.

Ingestion: Aspiration into the lungs may cause chemical pneumonitis, which can be fatal. Ingestion may cause irritation of the gastrointestinal tract. Nausea, Vomiting and Diarrhoea.

Treat symptomatically.

4.3 Indication of any immediate medical attention and special treatment needed

Notes to a physician:

IF INHALED: If unconscious, place in recovery position and get medical attention immediately. Administer oxygen if available and artificial respiration if

IF SWALLOWED: Do not induce vomiting because of risk of aspiration into the lungs. If aspiration is suspected obtain immediate medical attention. If vomiting occurs spontaneously, keep head below hips to prevent aspiration into the

## **SECTION 5: FIREFIGHTING MEASURES**

5.1 Extinguishing media

Suitable Extinguishing media

Unsuitable extinguishing media

5.2 Special hazards arising from the substance or mixture

5.3 Advice for fire-fighters Extinguish with sand or dry chemical. Foam, Carbon dioxide, Water fog or dry powder

Do not use water jet. Direct water jet may spread the fire.

Flammable liquid and vapour. Will float and can be reignited on surface water. Decomposes in a fire giving off toxic fumes: A mixture of solid and liquid particulates and gases including unidentified organic and inorganic compounds. May form explosive mixture with air. Prevent liquid entering sewers, basements and any watercourses. Vapours are heavier than air and may travel considerable distances to a source of ignition and flashback. If sulphur compounds are present in appreciable amounts, combustion products may include also H2S and SOx (sulfur oxides) or sulfuric acid

Fight fire with normal precautions from a reasonable distance. Fire fighters should wear complete protective clothing including self-contained breathing apparatus. Keep containers cool by spraying with water if exposed to fire. Avoid release to the environment. Dike fire control water for later disposal.

Caution - spillages may be slippery. Ensure operatives are trained to minimise

## **SECTION 6: ACCIDENTAL RELEASE MEASURES**

6.1 Personal precautions, protective equipment and emergency procedures

exposures. Ensure suitable personal protection during removal of spillages. Eliminate sources of ignition. Shut off leaks if without risk. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Avoid all contact with substance. Ensure adequate ventilation. Do not breathe vapour.

Do not ingest. If swallowed then seek immediate medical assistance. All official European languages. Do not use sparking tools. Use non-sparking ventilation systems, approved explosion-proof equipment, and intrinsically safe electrical

systems.

H2S Warning:

Small spillages:

Large spillages:

8 for appropriate personal protection equipment Wear flame-resistant antistatic protective clothing.

Evacuate the area and keep personnel upwind. Drench contaminated clothing with water before removing to avoid risk of sparks from static electricity. Avoid all contact. Wear chemical protection suit and breathing apparatus. See Also Section: 8.

Product may release Hydrogen Sulphide. Exposure controls - These controls may include: Segregation of areas, Access only to authorised persons, Permit to work systems, Confined space working procedures, Area H2S alarms, Personal H2S alarms, Personal escape sets, H2S awareness training. Please see section

Avoid release to the environment. Do not allow to enter drains, sewers or watercourses. Spillages or uncontrolled discharges into watercourses must be alerted to the Environment Agency or other appropriate regulatory body. If

6.2 **Environmental precautions** 

Revision: 4.1 Date: 10.06.2019

ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2015/830

necessary: Dike area to contain the spill and prevent releases to sewers, drains, or other waterways.

6.3 Methods and material for containment and cleaning Provided it is safe to do so, isolate the source of the leak. Use non-sparking equipment when picking up flammable spill. The vapour is heavier than air; beware of pits and confined spaces. Ensure that the equipment is adequately grounded. Allow small spillages to evaporate provided there is adequate ventilation. Wear flame-resistant antistatic protective clothing. Wear chemical protection suit and breathing apparatus.

Spillages onto land:

In case of soil contamination, remove contaminated soil and treat in accordance with local regulations. Adsorb spillages onto sand, earth or any suitable adsorbent material. Transfer to a lidded container for disposal or recovery. Dispose of this material and its container as hazardous waste.

Small spillages: Allow small spillages to evaporate provided there is adequate ventilation. Wear flame-resistant antistatic protective clothing.

Large spillages: Cover spillage with foam to reduce evaporation. Do not use water jet.

Collect as much as possible in clean container for reuse or disposal.

Small spillages: Contain product with floating barriers or other equipment. Collect spilled product by absorbing with specific floating absorbents.

Large spillages: Open waters should be contained with floating barriers or other mechanical means and recovered, only if this is strictly necessary and if fire/explosion risks can be adequately prevented. Otherwise control the spreading of the spillage, and let the substance evaporate naturally.

See Section: 8,13

Spillages on water or at sea:

# Reference to other sections **SECTION 7: HANDLING AND STORAGE**

Precautions for safe handling 7.1

6.4

H2S Warning:

7.2 Conditions for safe storage, including any incompatibilities

> Storage temperature Storage measures

Incompatible materials 7.3 Specific end use(s)

Obtain special instructions before use. Keep away from sources of ignition - No smoking. Use only outdoors or in a well-ventilated area. Prevent vapour build up by providing adequate ventilation during and after use. May form explosive mixtures with air. Take action to prevent static discharges. Use non-sparking tools. All parts of the plant and equipment should be electrically bonded together and connected to earth. Electrical continuity should be checked at regular intervals. Antistatic clothing and footwear should be used. The vapour is heavier than air; beware of pits and confined spaces. Avoid all contact with substance. Do not ingest. If swallowed then seek immediate medical assistance. Do not breathe vapour. See Section: 8. Keep good industrial hygiene. Wash hands thoroughly after handling. Contaminated clothing should be thoroughly cleaned. Product may release Hydrogen Sulphide: A specific assessment of inhalation risks from the presence of hydrogen sulphide in tank headspaces, confined spaces, product residue, tank waste and waste water, and unintentional releases should be made to help determine controls appropriate to local circumstances. These controls may include: Segregation of areas, Access only to authorised persons, Permit to work systems, Confined space working procedures, Area H2S alarms, Personal H2S alarms, Personal escape sets, H2S awareness training.

Light hydrocarbon vapours can build up in the headspace of containers. These can cause flammability / explosion hazards. Bund storage facilities to prevent soil and water pollution in the event of spillage. Keep only in original packaging. Keep containers properly sealed when not in use. Protect from sunlight. Containers of this material may be hazardous when empty since they retain product residue. Empty container may contain product residue which may result in flammable or explosive vapours inside the container.

Stable at ambient temperatures.

Suitable containers: Stainless steel, Mild steel

Do not store in: Synthetic materials Keep away from oxidising agents.

See Section: 1.2 and/or Exposure Scenario.

## SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 **Control parameters** 

Revision: 4.1 Date: 10.06.2019

#### ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2015/830

8.1.1 Occupational Exposure Limits

No Occupational Exposure Limit assigned. Users are advised to consider

national Occupational Exposure Limits or other equivalent values.

8.1.2 Biological limit value

8.1.3 PNECs and DNELs

PNEC: Not established.\*

DNEL	Oral	Inhalation	Dermal
Industry - Short term - Local effects	-	4300 (mg/m³)	-
Industry - Long Term - Systemic effects	-	68 (mg/m³)	2.9 (mg/kg bw/day)
Consumer - Long Term - Systemic effects	-	20 (mg/m <sup>3</sup> )	1.3 (mg/kg bw/day)

Not established.

#### 8.2 Exposure controls

#### 8.2.1 Appropriate engineering controls

Provide adequate ventilation, including appropriate local extraction if dusts, fumes or vapours are likely to be evolved. Store in a cool/low-temperature, well-ventilated (dry) place away from heat and ignition sources. Guarantee that the eye flushing systems and safety showers are located close to the working place.

# 8.2.2 Individual protection measures, such as personal protective equipment (PPE)

Protective clothing should be selected specifically for the working place, depending on concentration and quantity of the hazardous substances handled. The resistance of the protective clothing to chemicals should be ascertained with the respective supplier.

Fuels are typically used, transferred and transported in closed systems. If exposure is likely (i.e. during sampling) the following advice may be appropriate. Keep good industrial hygiene. Always wash hands before smoking, eating and drinking. Do not eat, drink or smoke at the work place.

Refer to annexes for exposure scenarios detailing use specific exposure controls

Use eye protection according to EN 166, designed to protect against liquid splashes.

Eye/ face protection

Skin protection

Respiratory protection

**Hand protection:** Wear impervious gloves (EN374). Gloves should be changed regularly to avoid permeation problems. Breakthrough time of the glove material: refer to the information provided by the gloves' producer.

Recommended: Nitrile rubber.

Body protection: Wear anti-static clothing and shoes.

small scale: Wear suitable coveralls to prevent exposure to the skin.

large scale: Chemical protection suit.

When the product is heated /In case of inadequate ventilation wear respiratory protection. The use of a high efficiency filter (EN143) is recommended. Filter

type A2

Closed system(s): Not normally required.

Thermal hazards Not applicable.

8.2.3 Environmental Exposure Controls Avoid release to the environment.

### **SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES**

9.1 Information on basic physical and chemical properties

<sup>\*</sup> Fuels, Diesel is a hydrocarbon UVCB. The hydrocarbon block method is used in PETRORISK to calculate the environmental toxicity (HC5) of each group of components in the substance. These are used to estimate the environmental risk for the substance. Therefore a PNEC is not available for Fuels, Diesel for individual environmental compartments.

Revision: 4.1 Date: 10.06.2019

#### ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2015/830

**Appearance** Liquid, Pale yellow Odour Diesel Odour Odour threshold Not established. Not established. Hq

Melting point/freezing point - 40 °C - + 6 °C Initial boiling point and boiling range 141 - 462 °C Flash point > 56 °C Evaporation rate Not established.

Flammability (solid, gas) Not applicable - Liquid Upper/lower flammability or explosive limits Not established. 0.4 kPa @ 40°C Vapour pressure

Vapour density Not established. 0.8 - 0.91 g/cm<sup>3</sup> @ 15 °C Relative density Solubility(ies) Immiscible with water. Partition coefficient: n-octanol/water Not established.

> 225 °C Auto-ignition temperature

**Decomposition Temperature** Not established. Viscosity > 1.5 mm<sup>2</sup>/s @ 40 °C

Explosive properties Not explosive. (Vapour may create explosive atmosphere.)

Oxidising properties Not oxidising.

9.2 Other information None known.

### **SECTION 10: STABILITY AND REACTIVITY**

10.1 Stability and reactivity Stable under normal conditions. Reacts with - Strong oxidising agents 10.2 Chemical stability Stable under normal conditions. Hazardous polymerisation will not occur. Product may release Hydrogen Sulphide.

10.3 Possibility of hazardous reactions Extremely flammable liquid and vapour. May form explosive mixture with air.

Vapours are heavier than air and may travel considerable distances to a source

of ignition and flashback. Product may release Hydrogen Sulphide.

10.4 Conditions to avoid Elevated temperature. Keep away from heat, hot surfaces, sparks, open flames

and other ignition sources. No smoking. Keep away from direct sunlight.

Keep away from oxidising agents. Strong Acids and Alkalis. 10.5 Incompatible materials

A mixture of solid and liquid particulates and gases including unidentified 10.6 Hazardous decomposition product(s) organic and inorganic compounds. Decomposes in a fire giving off toxic fumes:

COx, H2S, SOx,

## **SECTION 11: TOXICOLOGICAL INFORMATION**

11.1 Information on toxicological effects All test data taken from existing ECHA registrations for the substances

mentioned.

**Acute toxicity - Ingestion** Based upon the available data, the classification criteria are not met.

LD50 > 5000 mg/kg bw/day (rat) (OECD 401)

Acute toxicity - Inhalation Acute Tox. 4: Harmful if inhaled.

LC50 (inhalation,rat) mg/l/4h: 5.4 (OECD 403)

Based upon the available data, the classification criteria are not met. Acute toxicity - Skin Contact

LD50 > 4300 mg/kg bw/day (rabbit) (OECD 434)

Skin corrosion/irritation Skin Irrit. 2; Causes skin irritation.

Irritating to skin. (rabbit) (OECD 404)

Serious eye damage/irritation Based upon the available data, the classification criteria are not met.

Not irritating to eyes. (rabbit) (OECD 405)

Respiratory or skin sensitization Based upon the available data, the classification criteria are not met.

Sensitisation (guinea pig) - Negative (OECD 406)

Germ cell mutagenicity Based upon the available data, the classification criteria are not met.

In vitro: Negative (OECD 476)

In vivo: Negative (mouse) (OECD 475)

Carcinogenicity Carc. 2: May cause cancer.

> ECHA Registration Endpoint summary: According to EU CLP Classification (EC no. 1272/2008), VGO/Hydrocracked/Distillate fuels are classified for this

Reproductive toxicity Based upon the available data, the classification criteria are not met.

Revision: 4.1 Date: 10.06.2019

ECHA Registration Endpoint summary:

Reproductive toxicity: No classification is appropriate at this time.

Developmental toxicity: Developmental studies only observed developmental effects at doses that caused maternal toxicity and the developmental effects cannot be separated from the maternal effects; therefore classification for

developmental toxicity is not considered appropriate.

Based upon the available data, the classification criteria are not met.

Not classified. Weight of evidence approach

STOT RE 2; May cause damage to organs through prolonged or repeated

exposure.

Oral: No data

No adverse effect observed (rat) (OECD 453) Inhalation:

Chronic - Systemic effects NOAEC 1402 mg/m<sup>3</sup>

Causes skin irritation. (mouse) (OECD 410) Dermal: Chronic - Systemic effects NOAEL 0.5 ml/kg

Asp. Tox. 1; May be fatal if swallowed and enters airways.

None.

# **SECTION 12: ECOLOGICAL INFORMATION**

Aspiration hazard

Other information

11.2

STOT - single exposure

STOT - repeated exposure

12.1 **Toxicity** Aguatic Chronic 2; Toxic to aquatic life with long lasting effects.

Short Term (acute): LL50 (Fish) (96hr) 21 mg/l (OCED 203)

Long Term (Chronic): The aquatic toxicity was estimated using the PETROTOX computer model.

Estimated: NOEL 0.083 mg/l

12.2 Persistence and degradibility Readily biodegradable (according to OECD criteria).

12.3 Bioaccumulative potential The product has moderate potential for bioaccumulation. Partition coefficient n-

octanol/water (log P O/W): > 3

The product is predicted to have low mobility in soil. Liquid with low volatility. 12.4 Mobility in soil

12.5 Results of PBT and vPvB assessment Not classified as PBT or vPvB.

12.6 Other adverse effects None known.

### **SECTION 13: DISPOSAL CONSIDERATIONS**

13.1 Waste treatment methods

Dispose of this material and its container as hazardous waste. Do not empty into drains, dispose of this material and its container at hazardous or special waste collection point. Disposal should be in accordance with local, state or national legislation. Containers of this material may be hazardous when empty since they retain product residue. Containers must not be punctured or destroyed by burning, even when empty. Allocation of a waste code number, according to the European Waste Catalogue, should be carried out in agreement with the regional waste disposal company. Waste code: Fuel Oil (130701) and Diesel Fuel (150110).

## **SECTION 14: TRANSPORT INFORMATION**

		ADR/RID	IMDG/ADN

## **Contributing Scenarios**

#### Workers

PROC1 Use in closed process, no likelihood of exposure

(Storage) Bulk storage with occasional sampling from dedicated sample point

PROC2 Use in closed, continuous process with occasional controlled exposure

(Storage) Bulk storage with occasional sampling from dedicated sample point

PROC3 Use in closed batch process (synthesis or formulation)

(Sampling) Sample collection at ventilated sample points

(Elevated) Batch processes at elevated temperatures

(fuel additive) Covers the use as a fuel (or fuel additive), and includes activities associated with its transfer, use, equipment maintenance and handling of waste.

PROC4 Use in batch and other process (synthesis) where opportunity for exposure arises

PROC5 Mixing or blending in batch processes for formulation of preparations and articles (multistage and/or significant contact)

(Vapour) Substance in vapour phase.

PROC8a Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities

(Manual) Manual transfer/pouring from containers

(Maintenance) Equipment maintenance

(Cleaning) Vessel and container cleaning

PROC8b Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities

(bulk) Bulk transfer in a closed system

(Drum/batch transfers) Bulk transfers from tote tanks and supply vessels

(refuelling) Refuelling vehicles, light aircraft or marine craft.

PROC9 Transfer of substance or preparation into small containers (dedicated filling line, including weighing)

PROC14 Production of preparations or articles by tabletting, compression, extrusion, pelletisation

PROC15 Use as laboratory reagent

PROC16 Using material as fuel sources, limited exposure to unburned product to be expected

## Environment

**ERC2** Formulation of preparations

ERC4 Industrial use of processing aids in processes and products, not becoming part of articles

ERC5 Industrial use resulting in inclusion into or onto a matrix

ERC6a Industrial use resulting in manufacture of another substance (use of intermediates)

ERC6b Industrial use of reactive processing aids

ERC6c Industrial use of monomers for manufacture of thermo-plastics

ERC7 Industrial use of substances in closed systems

Concentration of substance in product	Covers concentrations up to 100%				
Human factors not influenced by risk m	Human factors not influenced by risk management				
Potential exposure area	Not defined				
Frequency and duration of use					
Exposure duration per day	Exposure duration per day  Covers daily exposures up to 8 hours (unless stated differently).				
Exposure duration per year	Exposure duration per year 300				
Other operational conditions affecting worker exposure					
Area of use	All contributing scenarios Indoor				
Characteristics of the surroundings	Not defined				

#### General measures applicable to all activities

Assumes a good basic standard of occupational hygiene is implemented. Assumes use at not more than 20°C above ambient temperature, unless stated differently. Control any potential exposure using measures such as contained or enclosed systems, properly designed and maintained facilities and a good standard of general ventilation. Drain down systems and clear transfer lines prior to breaking containment. Drain down and flush equipment where possible prior to maintenance. Where there is potential for exposure: Ensure relevant staff are informed of the nature of exposure and aware of basic actions to minimise exposures; Ensure suitable personal protective equipment is available; Clear up spills and dispose of waste in accordance with regulatory requirements; monitor effectiveness of control measures; consider the need for health surveillance; identify and implement corrective actions.

## General measures (skin irritants)

Avoid direct skin contact with product. Identify potential areas for indirect skin contact. Wear gloves (tested to EN374) if hand contact with substance likely. Clean up contamination/spills as soon as they occur. Wash off any skin contamination immediately. Provide basic employee training to prevent/minimise exposures and to report any skin problems that may develop.

Organisational measures				
PROC8a (Maintenance)  Drain down and flush system prior to equipment break-in or maintenance. Equivalent to LEV - Efficiency of at least: 80%				
Technical conditions of use				
PROC1, PROC2, PROC2 (Storage),				
PROC3, PROC8b (Bulk)  Handle substance within a closed system.				
Risk management measures related to human health				

Revision: 4.1 Date: 10.06.2019

## ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2015/830

Respiratory protection No special measures are required.		quired.		
Hand and/or Skin protection	PROC4, PROC8b (bulk), PROC 8b (Bulk closed loading), PROC 8b (Bulk open loading), PROC9	Wear suitable gloves tested to EN374 efficiency of at least 80%		
	PROC8a (Maintenance)	Wear chemically resistant gloves (tested to EN374) in combination with 'basic' employee training efficiency of at least 90%		
Eye Protection No special measures are required.				
Additional good practice advice beyond the REACH CSA. Obligations according to Article 37(4) of REACH do not apply				

Wear suitable gloves tested to EN374.

Ensure material transfers are under containment or extract ventilation.

Clear transfer lines prior to de-coupling.

Clear spills immediately.

Transfer via enclosed lines

Avoid dip sampling. (PROC3 – Sampling)

Retain drain downs in sealed storage pending disposal or for subsequent recycle. Apply vessel entry procedures including use of forced supplied air.

Wear suitable coveralls to prevent exposure to the skin. (PROC 8a – Maintenance)

Fill containers/cans at dedicated fill points supplied with local extract ventilation. (PROC9)  Les fume cupboard. (PROC15)  2. Control of environmental exposure  Amounts used  Fraction of EU tonnage used in region:  Regional use tonnage (tons/year):  Fraction of Regional tonnage used locally: tons/year  2.0E-03  Annual site tonnage (tons/year):  Asximum daily site tonnage (kgday):  2.0E-05  Environment factors not influenced by risk management  Flow rate of receiving surface water (m²/d):  Local freshwater dilution factor:  100  Querational conditions  Emission days (days/year):  Release fraction to air from process (initial release prior to RIMM):  Release fraction to soil from process (initial release prior to RIMM):  Release fraction to soil from process (initial release prior to RIMM):  Release fraction to soil from process (initial release prior to RIMM):  Release fraction to soil from process (initial release prior to RIMM):  Treat air emission to provide a typical removal efficiency of (%):  If discharging to domestic sewage treatment plant, provide the required onsite wastewater prior to receiving water discharge) to provide the required enrowal efficiency of (%):  If discharging to domestic sewage treatment plant, provide the required onsite wastewater removal efficiency of (%):  Organisational measures to prevent Limit release from site  Prevent discharge of undissolved substance to or recover from onsite wastewater.  Do not apply industrial sludge to natural soils.  Sludge should be incinerated, contained or reclaimed.  Conditions and measures related to municipal sewage treatment plant  Not applicable as there is no release to wastewater.  Do not apply industrial sludge to natural soils.  Sudde should be incinerated, contained or reclaimed.  Conditions and measures related to municipal sewage treatment plant  Not applicable as there is no release to wastewater.  Stop of municipal sewage system/treatment plant (m²/d) 2000  Estimated substance removal from wastewater via domestic sewage treatment (%)	wear suitable coveralis to prevent exposure to the skin. (PNOC 6a – Maintenance)

#### 3.2 Environmental exposure prediction

Exposure assessment (method/calculation model)

The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.

Fuels, Diesel is a hydrocarbon UVCB. The hydrocarbon block method is used in PETRORISK to calculate the environmental toxicity (HC5) of each group of components in the substance. These are used to estimate the environmental risk for the substance. Therefore a PNEC is not available for Fuels, Diesel for individual environmental compartments.

environmental exposure	STP	freshwater	marine water	soil	freshwater sediment	marine sediment
Predicted Environmental Exposure (PEC)	5.2E-02 mg/l	5.2E-03 mg/l	5.2E-04 mg/l	4.3E-02 mg/kg ww	5.8E-01 mg/kg ww	3.3E-02 mg/kg ww
Risk characterisation ratio (RCR)	3.4E-02	1.3E-01	1.3E-02	7.6E-04	2.0E-01	1.6E-02

Indirect exposure to humans via the environment:

Exposure route	Exposure estimation (µg/kg/day)	Risk characterisation ratio (RCR)		
Oral 1.3E+03		2.4E-02		
Inhalation 5.7E+03		1.3E-03		

4. Evaluation guidance to downstream user			
For scaling see	Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels.  Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).		
Health	Predicted exposures are not expected to exceed the applicable consumer reference values when the operational conditions/risk management measures given in section 2 are implemented. Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. Available hazard data do not allow the derivation of a DNEL for eye or respiratory tract irritant effects. Risk Management Measures are based on qualitative risk characterisation.		
Environment	Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater

A 1				

#### General measures applicable to all activities

Assumes a good basic standard of occupational hygiene is implemented. Assumes use at not more than 20°C above ambient temperature, unless stated differently. Control any potential exposure using measures such as contained or enclosed systems, properly designed and maintained facilities and a good standard of general ventilation. Drain down systems and clear transfer lines prior to breaking containment. Drain down and flush equipment where possible prior to maintenance. Where there is potential for exposure: Ensure relevant staff are informed of the nature of exposure and aware of basic actions to minimise exposures; Ensure suitable personal protective equipment is available; Clear up spills and dispose of waste in accordance with regulatory requirements; monitor effectiveness of control measures; consider the need for health surveillance; identify and implement corrective actions.

#### General measures (skin irritants)

Avoid direct skin contact with product. Identify potential areas for indirect skin contact. Wear gloves (tested to EN374) if hand contact with substance likely. Clean up contamination/spills as soon as they occur. Wash off any skin contamination immediately. Provide basic employee training to prevent/minimise exposures and to report any skin problems that may develop.

Organisational measures

Fraction of Regional tonnage used locally: tons/year	5.0E-04				
Annual site tonnage (tons/year):	3.4E+03				
Maximum daily site tonnage (kg/day):	9.4E+03				
Environment factors not influenced by risk management					
Flow rate of receiving surface water (m³/d):	Not defined (default = 18,000)				
Local freshwater dilution factor:	10				
Local marine water dilution factor:	100				
Operational conditions					
Emission days (days/year):	365				
Release fraction to air from process (initial release prior to	0.001				
RMM):	0.001				
Release fraction to wastewater from process (initial release prior	1.0E-05				
to RMM):	1.02 00				
Release fraction to soil from process (initial release prior to	1.0E+05				
RMM):					
Note: Common practices vary across sites thus conservative process release estimates used.					
Technical onsite conditions and measures to reduce or limit					
Treat air emission to provide a typical removal efficiency of (%):	0				
Treat onsite wastewater (prior to receiving water discharge) to	62.9				
provide the required removal efficiency of (%):					
If discharging to domestic sewage treatment plant, provide the	0				
required onsite wastewater removal efficiency of m³ (%):					
Treat soil emission to provide a typical removal efficiency of (%):	Not defined				
Organisational measures to prevent/limit release from site					
	Do not apply industrial sludge to natural soils.				
Sludge should be incinerated, contained or reclaimed.					
Conditions and measures related to municipal sewage treatment plant					
Not applicable as there is no release to wastewater.					
Size of municipal sewage system/treatment plant (m³/d)	2000				
Estimated substance removal from wastewater via domestic	94.9				
sewage treatment (%):	ote for disposal				
Conditions and measures related to external treatment of waste for disposal					
Substance release quantities after risk management measures					
Release to waste water from process (mg/l)	Not defined				
Maximum allowable site tonnage (MSafe) (kg/d):	6.9E+04

## 3.2 Environmental exposure prediction

Exposure assessment (method/calculation model)

The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.

Fuels, Diesel is a hydrocarbon UVCB. The hydrocarbon block method is used in PETRORISK to calculate the environmental toxicity (HC5) of each group of components in the substance. These are used to estimate the environmental risk for the substance. Therefore a PNEC is not available for Fuels, Diesel for individual environmental compartments.

environmental exposure	STP	freshwater	marine water	soil	freshwater sediment	marine sediment
Predicted Environmental Exposure (PEC)	2.4E-03 mg/l	2.8E-03 mg/l	2.4E-05 mg/l	4.5E-02 mg/kg ww	0.5 mg/kg ww	0.02 mg/kg ww
Risk characterisation ratio (RCR)	1.6E-03	7.7E-02	6.0E-04	6.6E-03	4.7E-02	1.1E-03

Indirect exposure to humans via the environment:

Exposure route	Exposure estimation Risk characterisation ratio (RCR) (µg/kg/day)	
Oral	31.2	0.02
Inhalation	5.8	0.001

4. Evaluation guidanc	4. Evaluation guidance to downstream user				
For scaling see	Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels.  Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).				
Health	Predicted exposures are not expected to exceed the applicable consumer reference values when the operational conditions/risk management measures given in section 2 are implemented. Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. Available hazard data do not allow the derivation of a DNEL for eye or respiratory tract irritant effects. Risk Management Measures are based on qualitative risk characterisation.				
Environment	Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using on-site technologies, either alone or in combination.
