~10,000

service stations worldwide

1.1GW

operational renewable
power capacity

~150

airports served by
Vitol Aviation

1.2mbpd

refining capacity

93kboepd

global E&P production

A LOGISTICAL EXPERT

Our logistical expertise complements our portfolio of traditional, transitional and sustainable energy solutions, helping our customers manage their physical risk and maximise opportunities.

INNOVATIVE ENERGY SOLUTIONS

We are supporting the energy transition, deploying capital and knowledge to provide Africa with sustainable energy solutions for today and tomorrow.

GLOBAL INFRASTRUCTURE NETWORK

Our customers benefit from our owned storage capacity of over 24 million cubic metres located in strategic hubs around the world.

WORLDWIDE REFINING CAPACITY

We are invested in refineries across Asia-Pacific, Europe and the Middle East offering a combined refining capacity of 1.2 million barrels per day.

EXPANSIVE DOWNSTREAM NETWORK

Our pan-African downstream company Vivo Energy supplies high-quality fuel to customers in 28 countries; a critical part of our 10,000+ global service station portfolio.

EXPLORATION AND PRODUCTION

Vitol has been operating exploration and production projects globally for over 20 years. Across the West African region, in partnership with Eni and the Ghanaian Government, we are invested in the OCTP and Block 4 gas to power projects and in 2025 invested in the Baleine project, Cote d'Ivoire, the first net-zero development in Africa.

INVESTING STRATEGICALLY

We have invested \$13+ billion in long-term assets globally and are committed to continued investment across the African continent, adding value and creating opportunities for our customers.

MARKET LEADER

As the world's largest independent trader of energy, our understanding of global energy flows is unique. We connect producers with consumers, deploying long-standing partnerships and technical expertise to ensure we meet the needs of our customers.

Financial strength

A unique ownership model enables us to take a long-term outlook and incentivises us to take a very measured approach to risk. This, coupled with our strong liquidity and risk management discipline, gives us a strong and stable financial base.

Proven partner

Our business is built upon long-standing relationships with producers, refiners and industrial customers. We have a solutions-focused approach and work collaboratively with our partners and customers to identify and implement optimal solutions.

Dedicated infrastructure

Strong investment in LPG infrastructure is complemented with 25+ LPG vessels. Our Navgas terminal in Nigeria is a key route for LPG flows. Working with our logistical networks and wholesale company Algasco, it offers a reliable and cost-effective supply to customers, helping Nigeria to meet its growing LPG demand. Vivo Energy continues to grow its pan-African customer base as a retailer and distributor; marketing Shell and Engen-branded fuels and lubricants across 28 African markets.

Risk management

We have expertise in the use of exchange-traded and OTC derivatives which we utilise to minimise price risk on the physical commodities and the energy we supply.

Responsible operations

Moving energy safely is integral to our operations. Our assets operate to international HSE standards and we look to work with partners who share our commitment to high standards of operation.

AN ESTABLISHED PRESENCE

Vitol has been a partner in Africa for over four decades. With a presence across the supply chain, we are continuously investing in new solutions to ensure we deliver Africa's energy needs, today and tomorrow.

CARBON PROJECTS FOR COMMUNITIES

Vitol has been a participant in carbon markets since 2007, trading over 140* mMTCO_2e of carbon credits last year alone. Built into our carbon trading model is a growing portfolio of carbon offset projects, with mature projects already operational in Africa.

Our carbon offset projects seek to sustainably avoid or reduce carbon emissions. Vitol only pursues projects that have a high social impact and tangible co-benefits for both people and the environment. Alongside climate benefits, our projects seek to address issues such as household pollution, deforestation rates and preventable diseases in the communities in which we operate.

We have partnered with local specialists to develop projects across DRC, Republic of South Africa, Rwanda, Uganda and Zambia. One of our largest projects aims to reduce carbon emissions from domestic cooking by distributing fuel efficient cookstoves. Over 2.8 billion people in the world still cook using some form of high-carbon emitting biomass such as charcoal or wood. So far, we have distributed over 2.1 million cookstoves in countries across Africa. These projects have the potential to generate in excess of 4 million TCO_2e of emission reductions per year.

All of our projects are certified by leading voluntary offset standards and are, as of this year, subject to an independent 3rd party review to ensure our carbon credits are high-quality.

VIVO ENERGY A GROWING PRESENCE

Vivo Energy is a market-leading, pan-African retailer and distributor of high-quality fuels and lubricants using the Shell and Engen brands.

The Group offers over 4,000 service stations, more than two billion litres of storage capacity and employs around 6,000 people across 28 African markets in North, West, East, Southern Africa and the Indian Ocean Islands.

Sourcing, distributing, marketing and supplying products to retail and commercial customers across Africa, Vivo Energy also provides a growing non-fuel retail offering and continues to develop innovative and responsible energy solutions.

BURGAN CAPE TERMINAL

STRENGTHENING SOUTH AFRICA'S FUEL SUPPLY SECURITY

We are continuously investing in energy infrastructure across Africa, offering our customers choice, flexibility and a reliable supply of product.

Burgan Cape Terminal (BCT) is a storage and distribution facility located at the Eastern Mole of the Port of Cape Town.

Offering 122,000 million cubic metres of storage capacity and a jetty capable of accommodating vessels of up to 50,000 DWT, the facility has a product portfolio which includes diesel and petrol for blending.

VTTI, Vitol's global terminal company, is the major shareholder of BCT. The infrastructure around VTTI in Cape Town plays a vital role, strengthening the country's secure fuel supply. It receives and distributes fuel that enhances the country's energy flexibility. The terminal is an active contributor to Broad-Based Black Economic Empowerment.

VITOL FOUNDATION

Since 2006, the Vitol Foundation has been dedicated to building the strength and resilience of the most overlooked communities.

Working entirely independently from Vitol's commercial operations, the Foundation focuses on four key areas: Early Childhood Care and Education, Health, Humanitarian Emergencies, and Water, Sanitation, and Hygiene.

Africa is at the heart of the Foundation's work, with priority countries including Sudan, Burkina Faso, Democratic Republic of Congo, Ethiopia, Madagascar, Malawi, Mozambique, Senegal, and Tanzania. By collaborating with local partners and providing both grants and repayable capital, the Foundation seeks out community-led solutions that deliver measurable, lasting impact.

Above all, the Vitol Foundation believes in investing for the future – supporting initiatives that create sustainable, systemic change for communities across Africa and beyond.
